Composition of space junk

time taken to fall
back to earth vs
orbital altitude +density

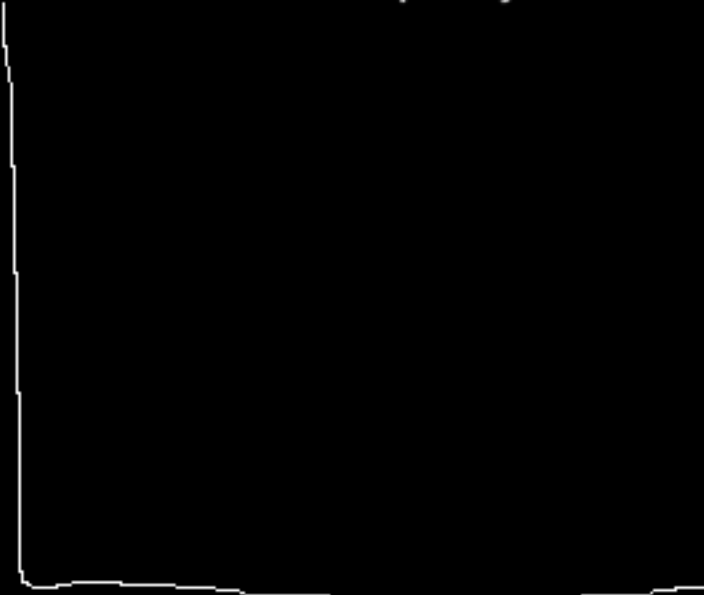

of objects

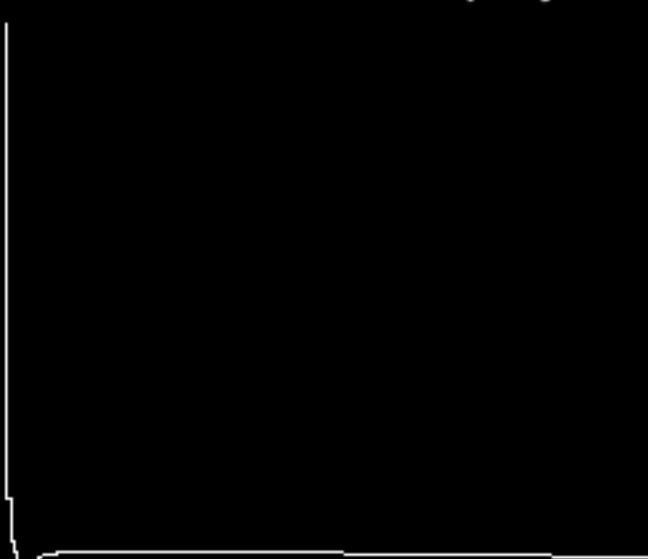

of tracked objects over time

cost of space junk

Number of maneuvers per year

Space junk travels
at 25000km/h in low earth orbit

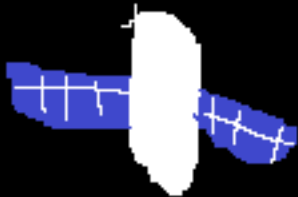

Chart shows visualization of
distribution of space junk.

but as backdrop

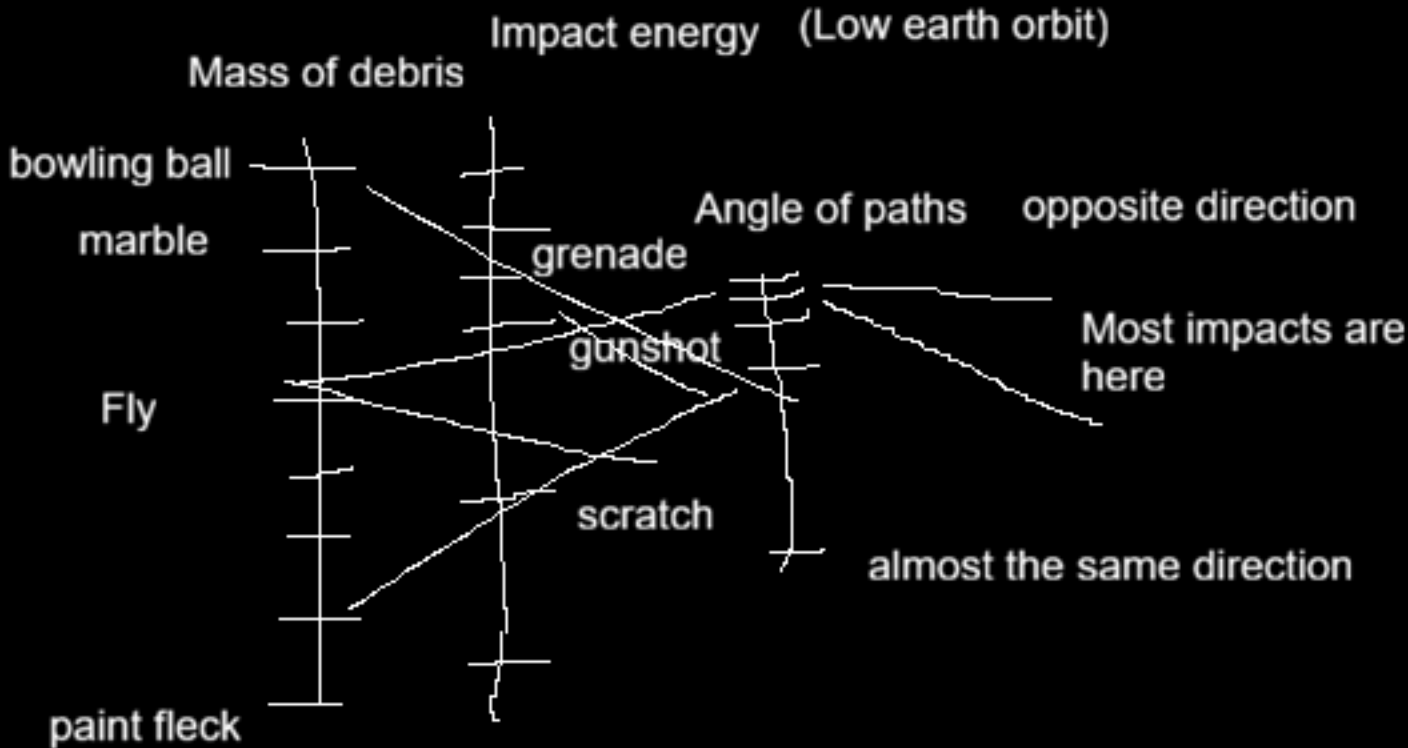

Altitude

Year

Space objects / collisions

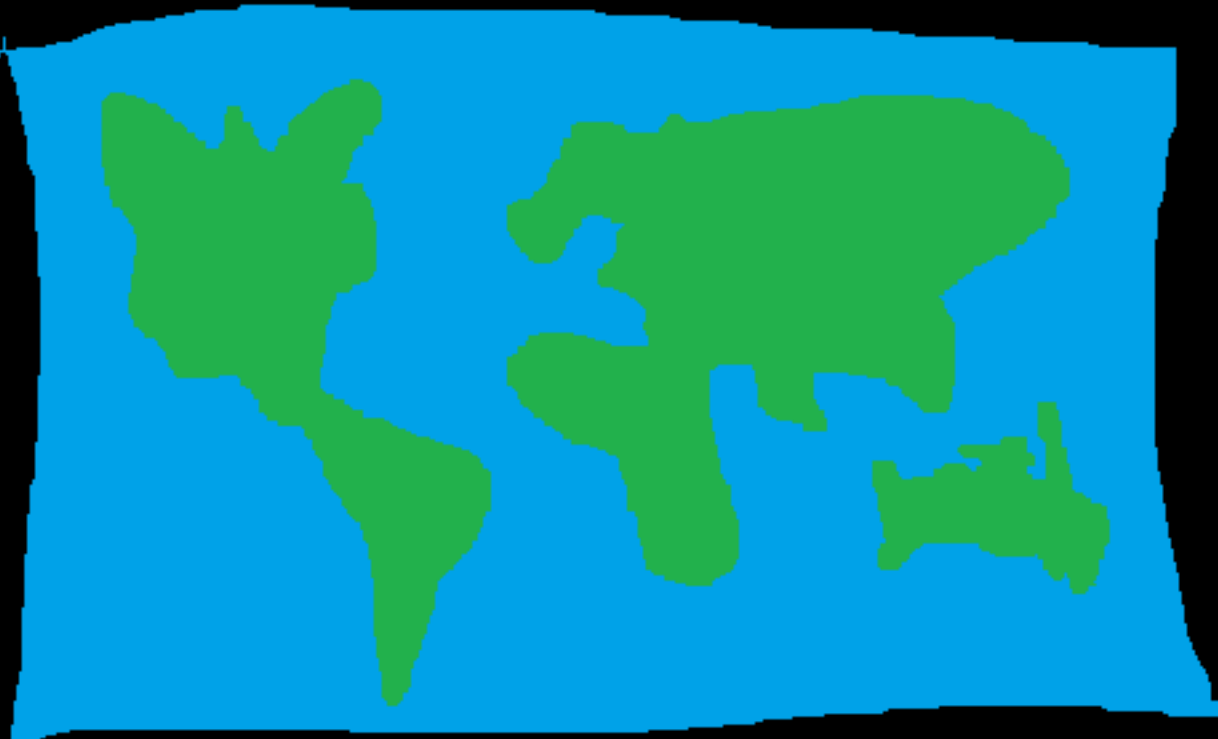

While you might think of it as just litter space junk
behaves like tiny bombs that impact at such high
speed it explodes.

location of recovered space junk

Countries responsible for space junk

Conclusion
